# Width Chart - Men

Most people don't know that there is not a standard width system used by shoe manufacturers. Healthy Feet Store has put together step by step instructions to help you determine your proper width.

1. Please trace around your foot onto a piece of paper (remove all footwear)
2. Measure the width at the widest point (as seen in graphic).
3. Locate your shoe size and find your measured width.
4. Find the corresponding "Standard Width" at the top of the column. That is your width!

For a more detailed explanation, please watch "How to Measure Your Feet At Home" video.
